Solution of question 1.2.2

Gagan Singla* – EE22BTECH11021

Question: We are given a triangle and the midpoints D, E, F of the sides AB, BC, AC respectively. We have to find the normal form of equation of lines AD, BE, CF.

Solution:

$$\mathbf{A} = \begin{pmatrix} 1 \\ -1 \end{pmatrix} \tag{1}$$

$$\mathbf{B} = \begin{pmatrix} -4\\6 \end{pmatrix} \tag{2}$$

$$\mathbf{C} = \begin{pmatrix} -3\\ -5 \end{pmatrix} \tag{3}$$

The mid points D, E, F of sides AB, BC, AC are :-

$$\mathbf{D} = \begin{pmatrix} \frac{-7}{2} \\ \frac{1}{2} \end{pmatrix} \tag{4}$$

$$\mathbf{E} = \begin{pmatrix} -1 \\ -3 \end{pmatrix} \tag{5}$$

$$\mathbf{F} = \begin{pmatrix} \frac{-3}{2} \\ \frac{5}{2} \end{pmatrix} \tag{6}$$

Now, the direction vector of line, **m** is:

$$\mathbf{m} = \mathbf{D} - \mathbf{A} \tag{7}$$

$$= \begin{pmatrix} \frac{-9}{2} \\ \frac{3}{2} \end{pmatrix} \tag{8}$$

The equation of line AD is:

$$\mathbf{n}^{\mathsf{T}}(\mathbf{x} - \mathbf{A}) = 0 \tag{12}$$

$$\implies \mathbf{n}^{\mathsf{T}}\mathbf{x} = \mathbf{n}^{\mathsf{T}}\mathbf{A} \tag{13}$$

$$\implies \left(\frac{3}{2} \quad \frac{9}{2}\right)\mathbf{x} = \left(\frac{3}{2} \quad \frac{9}{2}\right) \begin{pmatrix} 1\\ -1 \end{pmatrix} \tag{14}$$

$$\implies \frac{1}{2} \begin{pmatrix} 3 & 9 \end{pmatrix} \mathbf{x} = \frac{1}{2} \begin{pmatrix} 3 & 9 \end{pmatrix} \begin{pmatrix} 1 \\ -1 \end{pmatrix} \tag{15}$$

$$\implies (3 \quad 9) \mathbf{x} = (3 \quad 9) \begin{pmatrix} 1 \\ -1 \end{pmatrix} \tag{16}$$

$$\implies (3 \quad 9)\mathbf{x} = -6 \tag{17}$$

$$\implies 3 \begin{pmatrix} 1 & 3 \end{pmatrix} \mathbf{x} = 3 (-2) \tag{18}$$

$$\implies \begin{pmatrix} 1 & 3 \end{pmatrix} \mathbf{x} = -2 \tag{19}$$

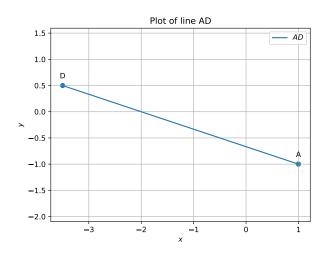

Fig. 0. Line AD

n can be written in the form :-

$$\mathbf{n} = \begin{pmatrix} 0 & 1 \\ -1 & 0 \end{pmatrix} \mathbf{m} \tag{9}$$

$$= \begin{pmatrix} 0 & 1 \\ -1 & 0 \end{pmatrix} \begin{pmatrix} \frac{-9}{2} \\ \frac{3}{2} \end{pmatrix} \tag{10}$$

$$= \begin{pmatrix} \frac{3}{2} \\ \frac{6}{2} \end{pmatrix} \tag{11}$$
